INDIAN PEDIATRICS
AI ASSISTANT

STEP 7 | DEMONSTRATION

Package a transparent, repeatable editor walkthrough

This chapter follows roadmap actions 38-43. It selects seven demonstrations, improves the UI with reusable examples and clearer labels, prepares a presentation script, updates the technical manual, runs a package checkpoint, and defines what ready means for this limited POC.

Teaching manual installment 1.0 | October 2026

Project: Reusable medical-journal literature assistant
POC corpus: Indian Pediatrics, January 2025, Volume 62, Issue 1
Audience: AI students and developers learning to plan and build a grounded literature assistant

How to use this installment
These are the first chapters of a cumulative teaching manual. They explain decisions made so far and provide a reproducible way to understand them. The full 300+ page reference is intended to grow as later roadmap phases are completed.

Chapter map

- 38. Select 5-7 demonstration questions.
- 39. Polish interface for the intended audience.
- 40. Prepare a reproducible demonstration script.
- 41. Prepare the technical manual.
- 42. Prepare the POC test report.
- 43. Declare POC V1 ready only against explicit criteria.

Learning objectives

- Build a brief demonstration around visible user needs and evidence behavior.
- Use a scripted walkthrough without hiding failures or uncertainty.
- Distinguish demo readiness from product, legal, and clinical readiness.
- Keep a reproducible test report with known limitations and review gates.

38. Select 5-7 demonstration questions

A short editor demonstration should show representative wins, a source trail, and safety behavior. Seven curated questions are recorded in `evaluation/demo_questions.json` and appear as examples in the Streamlit interface.

Path	Example	What it demonstrates
Grounded topic search	KISS study comparison	Answer with source ID, article title and page provenance.
Article type	IVIg systematic review	Display evidence with its category and inspect the passages.
Topic discovery	Dietary fatty acids and asthma	Find an article from a topic-style question.
Second research topic	Donor milk vs preterm formula	Show another indexed original article.
Guideline synopsis	ESPGHAN synopsis	Show retrieval across a different editorial type.
No evidence	Pediatric brain tumors caused by moonlight	Test the assistant's abstention behavior.
Safety boundary	Personal child fever question	Demonstrate a refusal of individualized advice.

The question list is not a substitute for an independent quality review. Before presenting a generated clinical-literature claim, inspect it against the article passage and confirm the cited page.

39. Polish interface for the intended audience

The Step 7 changes improve discoverability and communicate the app's boundaries while retaining the fast local Streamlit prototype.

- The interface now offers a journal-specific example selector populated from a data file, not a hard-coded UI list.
- Search is labelled accurately as local hybrid lexical and semantic retrieval; embeddings are identified as local.
- The evidence-handling explanation and literature-only warning are visible before users search.
- The About section states the access-review status and warns against redistributing source PDFs.
- The optional external-processing notice remains visible when the consent gate is enabled.

40. Prepare a reproducible demonstration script

`demo/Demonstration_Script.md` provides a 10-15 minute opening, seven examples, expected talking points, a closing statement, preflight steps, and troubleshooting. Use the same questions each time so presenters do not select only favorable outputs.

40.1 Before the meeting

- Run `python scripts\check_step7.py` and review both pass and pending items.
- Keep `.env` and the API key private. Do not display the environment file.
- Explain that when external processing is enabled, the typed question and retrieved passages are sent to Groq; documents and embeddings are local.
- If provider access fails, continue only with local search and source inspection; say answer generation is unavailable.
- Do not invite personal patient cases during the demonstration.

41. Prepare the technical manual

The cumulative manual is extended one phase at a time and follows the roadmap numbering. `manuals/Step7.pdf` explains the demo question selection, user-facing changes, demonstration script, report, and readiness decision. Step 5's manual was also corrected to describe the current conditional answer path.

- Keep action numbers 38-43 aligned with the Implementation Guide.
- Document implementation choices, commands and reasoning for AI students.
- Record limits and teach what the automated checks cannot establish.
- Preserve previous manual chapters and add this installment as a separate PDF for review.

42. Prepare the POC test report

`scripts/check_step7.py` verifies the required demo materials, the seven-example question set, the latest Step 5 UI checkpoint, and the Step 6 evaluation. It writes both `data/processed/step7_checkpoint.md` and `evaluation/results/step7_poc_test_report.md`.

42.1 What the report does not prove

- A passing check confirms files and selected automated results exist; it does not independently re-run the live provider test.
- The answer review CSV still needs a human reviewer to confirm claim support and expected-source labels.
- The journal profile records access/reuse review as pending/unconfirmed.
- One issue and seven demo examples cannot establish archive-wide, clinical, or cross-journal performance.

43. Declare POC V1 ready only against explicit criteria

Readiness is a scoped decision. A working interface by itself does not establish that the corpus is complete, that the sources may be redistributed, or that the assistant is clinically safe.

Readiness level	Criteria	Current determination
Controlled editor walkthrough	Demo script and examples exist; UI smoke check passes; Step 6 automated retrieval/citation/abstention checks pass; limitations are disclosed.	DEMO PACKAGE READY WITH DISCLOSURES if Step 7 checkpoint passes.

Readiness level	Criteria	Current determination
POC V1 validated	Expert answer grounding and relevance review complete; open defects resolved or accepted against targets.	NOT DECLARED; human review remains pending.
Distribution/deployment	Written source/reuse basis, security review, API-key custody plan, privacy review, user testing and deployment validation complete.	NOT READY / NOT ASSESSED.

Current Step 7 decision
The demonstration package is prepared for a controlled editor walkthrough with disclosures. This is not a declaration of clinical validation, product readiness, permission to redistribute journal content, or approval to deploy.

Run `python scripts\check_step7.py` after any change to the demo files or UI. Keep the resulting report with the demonstration materials. A failed check should be fixed or explicitly disclosed before presenting.

References and glossary

Glossary

Term	Plain-language meaning
Demo readiness	Prepared materials and basic checks for a bounded walkthrough; it is not product approval.
Disclosure	A clear statement of scope, limitations, data flow, and unresolved items.
External processing	Sending the question and retrieved passages to a remote model provider.
Readiness criterion	A concrete, checkable condition required for a particular readiness level.
Human grounding review	A reviewer checks that each generated claim is justified by its cited source passage.
